Importance: High

Dana- I edited this draft slightly...new words are in black but I didn't show those words struck out...let me know what you think-

Barry,

Thanks for the feedback on our update on the 15 mines impacted by the cessation. Attached is the PDF we received last night from Teresa Hill with your handwritten comments and questions.

Please find attached the revised **site status** update. Per your comments, we have:

- Revised the paragraph at the bottom of the first page to note that Standard Mine has ~~again had work stopped~~ stopped work again due to the 10/6 spill.
- Revised that same paragraph, and added sub-bullets, to summarize the status of the fifteen mining sites that were originally flagged ~~for~~ as concern in mid-August.
- Added a column to the 15-site table to indicate the current status of each mine.

Please also find a revised compilation of the documents sent between Headquarters and the regions memorializing discussions on the five sites that were allowed to continue operating in mid- to late-August, as well as the three sites that were allowed to re-start following the September 4 memo process. This document is similar to the last night's but is more complete as it includes correspondence related to all 8 of those sites:

- ████████ Standard Mine
- ████████ Leviathan
- ████████ Argonaut
- ████████ Callahan
- ████████ Bullion
- ████████ Captain Jack
- ████████ Pennsylvania; and
- ████████ Red and Bonita

We believe this message and its attachments provide responses to all of your comments and questions, including providing appropriate updates and documentation for the 15 sites in question. Please let us know if you have any additional questions. Thanks.

Thanks so much. This helps.

Would you and colleagues please do two things:

1. Add a column to the chart specifying which of the three categories each site is in. It looks like some sites might have a portion in one category and a portion in another category, and some sites might have changed categories since they were originally identified. Those would be important factors to note, either in the column or in a footnote, etc.
2. Would you include as attachments the site-by-site correspondence documenting the discussions, that we referenced at the bottom of page 2 and the top of page 3 of the September 4 memo.

Barry

Subject: Update on the fifteen mines impacted by the cessation

Barry,

Attached is an enhanced update on the fifteen sites that were impacted by the cessation directive after the Gold King Mine spill. We have focused on adding some more detail on the five sites that were identified as a concern but where work continued [the last five on the list]. We may have some additional detailed information if needed, but we think what is presented here provides good insight into the activities at those five sites. Please let us know if you have any questions or need further info. Thanks - Dana
